### REPEAT

#### SPACE REQUIREMENTS.

Enclosures shall be constructed and maintained so as to provide sufficient space to allow each animal to make normal postural and social adjustments with adequate freedom of movement. Inadequate space may be indicated by evidence of malnutrition, poor condition, debility, stress, or abnormal behavior patterns.

\*\*\* Four adult tigers are being housed in 3 separate enclosures with tops. These enclosures are 6 feet in height. This height is not sufficient to allow these animals to make normal social and postural adjustments or provide them freedom of movement. Additional height for these animals is required to correct this.

REMAINS UNCORRECTED

\*\*\*Note: This non-compliant item was documented on an inspection report dated October 26, 2011 with an original correction date of January 1, 2012. The licensee requested an extension to this correction date in December 2011 and was granted a conditional extension until May 20, 2012 provided the facility did not acquire any additional large felids. The licensee recently acquired a black leopard and has not corrected the non-compliance. The licensee stated during this inspection that she was unaware that the extension included all large felids since the non-compliant item involved tiger enclosures.

\*\*\* Inspection and exit interview conducted with the licensee
